

OH POOH!!

*Just a gentle reminder to scoop it, bag it and take it with you!
Thanks for keeping Pinion Hills a great place to live!!*

Are you a *good neighbor* dog owner? Do you help to prevent environmental contamination by picking up and properly disposing of your dog's feces? Here are some good reasons to "Pick-Up After Your Dog:"

Removing dog feces prevents reinfestation of your dog from exposure to infective worm eggs and larvae, and dog feces can transmit diseases from your dog to people. Roundworm, hookworm and other parasitic worms may be transmitted to young children and adults who play or work in their yard/dirt where dog feces are present. Ocular larva migrans - an eye disease caused by parasitic worms found in dog droppings can cause serious eye damage to young children. Clean it up, please!

Animal waste can be a contributor to storm water pollution. It contains disease-carrying bacteria and toxins that can increase the risk of viral infections, flu, and skin rashes. More than 10 million gallons of water containing fecal contaminants from human and animal sources, flows into neighborhood storm drains every day - even more when it rains. Take it with you!

Let's all get caught holding the bag!!
